

Project Evaluation Template

Project: Pablo Gratas - Bullet Journal

Reviewer: Han

Code/Repo Smells

- ☐ Does the code seem organized and readable?
 - ☐ Good indentation, meaningful naming, good amount of commenting, etc.
 - **Code looks fine and organized by file types.**
 - **A lot of nested div tho..**
 - **Little comments**
- ☐ How simple (or complex) is the architecture?
 - ☐ Repo navigable, files organized meaningfully, etc.
 - **Uses react so there's a potential learning curve.**
 - **Pretty standard for a react project**
- ☐ Is there a CI/CD pipeline in place?
 - ☐ Are there automated tests in place?
 - **Documentation for CI/CD but only phase 2?**
 - **Meeting minutes, branding, sprints, etc are well-documented!**
- ☐ Is there proper documentation?
 - ☐ Code: Class diagrams, API descriptions, etc.
 - **Can't find diagrams**
 - **No api was used**
 - ☐ Repo: Onboarding documents, pipeline instructions, roadmaps, high level diagrams, ADRs, etc.
 - **Meeting minutes, branding, sprints, etc are well-documented!**
 - **No roadmaps, high level diagrams, and ADRs.**

Score (1-5): 3.5

Comments:

- Code seems organized
- Testing needs much work
- Well-documented meetings are great; can go back to reference info and design rationale.
- Concerned about using react?

Application Quality

- ☐ Is the app easy to set up and run?
 - **App is pretty intuitive**
 - **Maybe an instruction page on how to use.**
- ☐ Was there a design process?
 - **Can't find any design documentation on repo. Are they not here or was there no design system at all?**
- ☐ Can it be stood up easily?
 - **App seems functional.**
 - **Can only plan for the current date tho. What if users want to plan out their week?**
- ☐ Does the app seem functional? Does it work as expected?
 - **Overall everything looks fine.**
 - **UI fits the bullet journal vibe.**
- ☐ Does it seem polished?
 - **Pretty simple; UI can use some improvement**

- ☐ Intuitive to use? Complicated and unfriendly?
 - **Pretty user friendly**
 - **Maybe some guide or inspo prompts for users to plan out.**
- ☐ Responsive? Janky?
 - **Not responsive on mobile AT ALL.**
- ☐ Bugs everywhere?
 - **Nothing that messes with functionality at first glance.**
- ☐ Pleasing UI? Hard to look at?
 - **Pretty simple and intuitive**
 - **Color scheme is cool; if we can add an option to change color palettes, it'd be very good.**
- ☐ Accessibility options?
 - **None; only one design available**

Score (1-5): 4

Comments:

- Adding a mobile friendly interface after having the desktop ready would be a pain.
- Add options to change colors for accessibility.
- Add options to plan out future dates.
- Maybe some kinds of user interaction (confetti when user completes a task for ex)
- Would like to see design documentation.

Self Considerations

- ☐ What tools and frameworks are used? Are they difficult to pick up?
 - **React was used; could be challenging to pick up in a short amount of time without much web dev experience.**
- ☐ At a glance:
 - ☐ Would this project be fun to work on?
 - **Need improvement on design.**
 - **Layout looks fine to me. Not quite sure what can be added or changed on backend.**
 - **Adding fun features such as rewards to make the app more complete.**
 - ☐ How much more could we improve this project?
 - **Improvement on design and mobile should be top priority.**
- ☐ Do we have team members familiar with specific tools/dependencies used?
 - **I am familiar with react; not sure about everyone.**

Score (1-5, will be discounted by 50%): 4

Comments:

- I like the design; fits the theme of bullet journal
- WHY NO MOBILE FIRST?
- I can see a lot of improvement with UI; not sure about backend functionality.
- Def need to add more features.

Other Comments: much cool
